Important updates: If you're using Eclipse and creating your own project, you may be asked to make a module name. The safest thing to do is to press the Don't Create button. If you make a name and click the Create button, Eclipse may refuse to run the code. (The modules may not contain files that are not in the named packages. Anyway, if your project contains a file called module-info.java, delete that file. The best place to get Java JDK - I suggest downloading Java 11, but almost any version of Java should work.
